**Part III DETAILED ACTION**

\*\*\* This office is in response to filing of the application on October 06, 2003.

***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
  - I. Claims 20-25, drawn to a donor wafer, classified in Class 257, subclass 619.
  - II. Claims 1-19, drawn to a method of producing a substrate, classified in Class 438, subclass 459.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). Unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by process material different than those/that of the group II invention. For example: instead of bonding a donor wafer to a support and detaching to produce a substrate having a transfer layer, epitaxially growing a transfer layer on a support.

Because these inventions are distinct for the reasons given above and have acquired a separate status as shown by the above different classifications and as given in the above examples, the fields of search are not co-extensive and separate examination would be required, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
